MORNINGSTAR RATING

Morningstar Rating: 5 / 5 Rated within Commodities Focused over 3/5/10Y

Morningstar assigns 1–5 stars based on a fund's historical risk-adjusted return relative to its category cohort. The top 10% of funds receive 5 stars; the bottom 10% receive 1 star. New funds with under 3 years of history are unrated.

RISK & INCOME SCORES

79

Risk Score

Lower volatility and drawdowns than most category peers.

Income Score

Not enough peer data to score income.

4 warnings

[Details on Page 6](#)

Risk Score: Blends volatility, maximum drawdown, downside deviation, and beta. Higher means LESS risky than peers — a 90 is a calm fund, a 10 is a wild one. **Income Score:** Blends yield, distribution growth, and consistency. Higher means stronger, steadier income than peers. **Warnings Flag:** Appears when our automated checks find structural concerns (leverage, low liquidity, high fees, concentration, and so on). The color reflects the most severe finding; details are on the Investor Warnings page.

BUSINESS SUMMARY

The investment seeks to reflect the performance of the price of gold bullion, less the expenses of the Trust's operations. The Trust holds gold bars and from time to time, issues Baskets in exchange for deposits of gold and distributes gold in connection with redemptions of Baskets. The investment objective of the Trust is for the Shares to reflect the performance of the price of gold bullion, less the Trust's expenses. The Sponsor believes that, for many investors, the Shares represent a cost-effective investment in gold. The current manager has run the fund for 21.6 years.

HISTORICAL TRENDS

Calendar-year results from year-end snapshots. Diamonds mark the category average.

Total Return by Year (%)

Sharpe Ratio by Year

Risk-adjusted returns have improved: the last three years average a 1.71 Sharpe ratio vs 0.24 for the prior three. GLD beat its category average in 7 of the last 10 calendar years.

Sharpe Ratio: Return earned above the risk-free rate per unit of volatility — risk-adjusted performance. Higher is better; a negative year means the fund underperformed Treasury bills.

Volatility runs below the category average. 3-year risk-adjusted returns beat the category (Sharpe 1.14 vs 0.41). Drawdowns have been shallower than peers (-26.2% vs -33.6%). It has captured more of the market's gains (53) than its losses (-57).

Volatility (σ): The standard deviation of returns — how widely results swing around their average. Higher numbers mean a bumpier ride. **Beta:** Sensitivity to S&P 500 moves. A beta of 1.2 tends to move 20% more than the market in both directions; below 1 means more muted moves. **Sharpe Ratio:** Return earned above the risk-free rate per unit of volatility. Higher is better; negative means the fund underperformed Treasury bills. **Sortino Ratio:** Like the Sharpe ratio, but only penalizes downside swings — useful when upside volatility should not count against a fund. **Max Drawdown:** The deepest peak-to-trough loss over the window. Closer to zero is better; it answers "how bad did it get?" **Upside / Downside Capture:** The share of the S&P 500's gains (and losses) the fund participated in. The ideal combination is high upside capture with low downside capture. **Downside Deviation:** Volatility computed from negative returns only — the input to the Sortino ratio.

Tracking error here is vs the S&P 500 (Morningstar's standard index), not the fund's own benchmark, so sector and bond funds read high even when they track their own index closely.			Price / NAV

Tracking vs Own Index (Best Fit)			Liquidity		
How closely the fund follows the index it actually tracks. R-squared near 100% and beta near 1.00 indicate tight replication.			3 Month Avg Dollar Volume

3 Year Alpha	+15.06%		79.4%		

Expense Ratio: The annual management fee as a percentage of your investment, deducted from fund assets automatically. **12b-1 Fee:** A recurring marketing and distribution charge some mutual funds levy — part of the expense ratio that buys you no management. **Turnover Ratio:** How much of the portfolio is replaced each year. High turnover raises trading costs and, in taxable accounts, capital-gain distributions. **Tracking Error:** How far an index fund's returns have strayed from its benchmark. A faithful index fund should be near zero. **Tax-Cost Ratio:** Morningstar's estimate of the annual return lost to taxes on distributions for an investor in the top federal bracket. **Premium / Discount:** The gap between an ETF's market price and the value of its holdings (NAV). Persistent premiums mean you overpay buying; discounts shortchange you selling. **Dollar Volume:** Average daily trading value. Thinly traded ETFs have wider spreads and are harder to exit near fair value.

INVESTOR WARNINGS

Automated checks for structural risks: leverage, fund size, liquidity, costs, taxes, concentration, index tracking, and volatility.

Loose Index Tracking **Caution**

3Y R-Squared vs Best-Fit Index (%): 49.8

This fund is classified as an index fund but its 3-year returns correlate loosely with its closest (best-fit) index — an R-squared well below ~100% means it is not replicating an index tightly. Verify which index it follows and why returns deviate.

Concentrated Portfolio **Caution**

Top 10 Weight (%): 100 · Holdings: 2

A large share of assets sits in the top ten holdings, so a few positions drive results. Diversification within the fund is limited.

High Volatility **Caution**

Volatility Percentile: 92

This fund is more volatile than most of the investable universe. Expect larger swings in both directions.

Wide Premium / Discount **Note**

1Y Avg P/D (%): 0.17 · 1Y P/D Range (%): 4.48

This ETF has traded persistently away from its net asset value, or across a wide band. You may pay a premium buying and accept a discount selling.
