MORNINGSTAR RATING

Morningstar Rating: 3 / 5 Rated within Intermediate Core-Plus Bond over 3/5/10Y

Morningstar assigns 1–5 stars based on a fund's historical risk-adjusted return relative to its category cohort. The top 10% of funds receive 5 stars; the bottom 10% receive 1 star. New funds with under 3 years of history are unrated.

RISK & INCOME SCORES

66

Risk Score

Risk profile is roughly in line with the category.

59

Income Score

Income generation is mid-pack for the category.

Risk Score: Blends volatility, maximum drawdown, downside deviation, and beta. Higher means LESS risky than peers — a 90 is a calm fund, a 10 is a wild one. **Income Score:** Blends yield, distribution growth, and consistency. Higher means stronger, steadier income than peers. **Warnings Flag:** Appears when our automated checks find structural concerns (leverage, low liquidity, high fees, concentration, and so on). The color reflects the most severe finding; details are on the Investor Warnings page.

BUSINESS SUMMARY

The investment seeks maximum total return, consistent with preservation of capital and prudent investment management. The fund invests at least 65% of its total assets in a diversified portfolio of Fixed Income Instruments of varying maturities, which may be represented by forwards or derivatives such as options, futures contracts, or swap agreements. It invests primarily in investment-grade debt securities, but may invest up to 20% of its total assets in high yield securities. It may invest up to 30% of its total assets in securities denominated in foreign currencies, and may invest beyond this limit in U.S. dollar-denominated securities of foreign issuers. The current manager has run the fund for 0.5 years.

TOP HOLDINGS

This fund holds 143% bonds and virtually no stocks, so a top-10 list does not apply. Bond funds own hundreds of individual issues and Morningstar does not provide a per-issue list for this fund. See the Fixed Income Statistics for portfolio character.

SECTOR WEIGHTS

This fund holds 143% bonds and virtually no stocks, so stock-sector weights do not apply. See the Fixed Income Statistics and bond style box for portfolio character.

HISTORICAL TRENDS

Calendar-year results from year-end snapshots. Diamonds mark the category average.

Total Return by Year (%)

Sharpe Ratio by Year

Distribution Yield by Year (%)

Risk-adjusted returns have improved: the last three years average a 0.23 Sharpe ratio vs -0.23 for the prior three. PTTRX beat its category average in 6 of the last 10 calendar years.

Distribution Yield: Total distributions paid that year as a percent of the year-end price. For funds this includes capital-gains distributions, so it can spike in years with large realized gains.

Sharpe Ratio: Return earned above the risk-free rate per unit of volatility — risk-adjusted performance. Higher is better; a negative year means the fund underperformed Treasury bills.

Volatility runs above the category average. 3-year risk-adjusted returns beat the category (Sharpe 0.21 vs 0.06). It has captured more of the market's losses (35) than its gains (14).

Volatility (σ): The standard deviation of returns — how widely results swing around their average. Higher numbers mean a bumpier ride. **Beta:** Sensitivity to S&P 500 moves. A beta of 1.2 tends to move 20% more than the market in both directions; below 1 means more muted moves. **Sharpe Ratio:** Return earned above the risk-free rate per unit of volatility. Higher is better; negative means the fund underperformed Treasury bills. **Sortino Ratio:** Like the Sharpe ratio, but only penalizes downside swings — useful when upside volatility should not count against a fund. **Max Drawdown:** The deepest peak-to-trough loss over the window. Closer to zero is better; it answers "how bad did it get?" **Upside / Downside Capture:** The share of the S&P 500's gains (and losses) the fund participated in. The ideal combination is high upside capture with low downside capture. **Downside Deviation:** Volatility computed from negative returns only — the input to the Sortino ratio.

Tracking vs Own Index (Best Fit)

How closely the fund follows the index it actually tracks. R-squared near 100% and beta near 1.00 indicate tight replication.

Best-Fit Index	Morningstar US Core Bd TR USD
3 Year R-Squared	98.4%
3 Year Beta	1.10
3 Year Alpha	+1.48%

Expense Ratio: The annual management fee as a percentage of your investment, deducted from fund assets automatically. **12b-1 Fee:** A recurring marketing and distribution charge some mutual funds levy — part of the expense ratio that buys you no management. **Turnover Ratio:** How much of the portfolio is replaced each year. High turnover raises trading costs and, in taxable accounts, capital-gain distributions. **Tracking Error:** How far an index fund's returns have strayed from its benchmark. A faithful index fund should be near zero. **Tax-Cost Ratio:** Morningstar's estimate of the annual return lost to taxes on distributions for an investor in the top federal bracket. **Premium / Discount:** The gap between an ETF's market price and the value of its holdings (NAV). Persistent premiums mean you overpay buying; discounts shortchange you selling. **Dollar Volume:** Average daily trading value. Thinly traded ETFs have wider spreads and are harder to exit near fair value.

Most recent increase: +5.8% (2026) · Growth streak: 2 consecutive years.

Five-year dividend growth: 17.0%/yr.

SEC 30-Day Yield: A standardized yield all funds compute the same way: the last 30 days of interest and dividend income, net of expenses, annualized. It reflects current holdings and rates, so it is the best number for comparing funds. An asterisk means fee waivers are propping it up.
